

Online Fashion Store

1. Inroduction

Nowadays, the coronavirus COVID-19 is affecting in all over the world. So, online learning, online shopping, online meeting become important. The aim of my project is to protect people from corona virus, to buy something that they want from online. For customer, they can choose items and order easily what they love. And then, this application can bring storing order easily, recording sale data safely and showing items perfectly.

2. Expected List of Features

- Authentication for user login
- Administration of users
- Data Record
- Sale Report

3. Market Survey

- In some five web sites, most of features are similar with features that included in my projects.
- These web sites include customer registration.
- But in my project customer will not register to view my website .
- If customer want to order products , they need to fill name, address and phone.
